

**Renfrewshire Local Development Plan – Proposed Plan** 

Strategic Environmental Assessment Addendum 1 – Policies and Spatial Strategy

#### Assessment of the Proposed Local Development Plan Proposed Plan Policies and Spatial Strategy

- 1.1 A Strategic Environmental Assessment (SEA) was carried out in relation to the Renfrewshire Local Development Plan Proposed Plan to determine the likely environmental impacts of its proposed polices and the Spatial Strategy.
- 1.2 The policies within the Local Development Plan Proposed Plan fall under five key themes. The five themes aim to deliver the Spatial Strategy. The five themes are summarised below:
  - Economy supports the delivery of City Deal projects and directs economic investment to the most suitable locations.
  - Centres supports investment into Renfrewshire's Centres to deliver vibrant, well designed and accessible places.
  - Infrastructure supports investment which assists sustainable communities by ensuring people and places are well connected.
  - Places supports investment which creates strong communities and attractive places.
  - Environment promotes sustainable development that contribute towards minimising carbon and greenhouse gas emissions and supports adaptation to the likely effects of climate change.
- 1.3 The Strategic Environmental Assessment assesses the Spatial Strategy and each policy against the nine SEA topics. The Spatial Strategy and each policy have been scored appropriately according to the environmental impact.

- 1.4 The assessment includes a consideration of whether the effects described are likely to be, short, medium or long term. Time periods were ascribed to any significant environmental effects as follows:
  - Short Term: An effect that is likely to occur nearer the start of the plan period i.e. in the next 1-5 years
  - Medium Term: An effect that is likely to occur towards the end of the plan period i.e. in about 5-10 years
  - Long Term: An effect that is considered likely to occur beyond the period of the Plan i.e. 10 years hence.
- 1.5 Consideration is also given to the whether the effects are thought to be permanent or temporary in nature. An assessment of secondary, cumulative and synergistic effects is also included, any co-location issues identified and any mitigation that may be required.
- 1.6 A Habitats Regulation Appraisal has also been published alongside the updated Environmental Report which has assessed each of the policies and Appropriate Assessment has been carried out where applicable.
- 1.7 Figure 1 shows the Strategic Environmental Assessment of the policies and Spatial Strategy within the Renfrewshire Local Development Plan Proposed Plan.

#### **SPATIAL STRATEGY**

All development proposals will require to be considered in relation to the Spatial Strategy diagram Figure 2.

New development will be supported where it aims to incorporate the following criteria (where relevant):

- Supports sustainable and inclusive economic growth and/or is related to the delivery of City Deal investment;
- Contributes positively to the character and appearance of the place, benefiting the amenity of the area and protecting and enhancing the natural, built and cultural heritage and it's setting;
- Will regenerate and invest in Renfrewshire's Network of Centres;
- The design of new development is demonstrated to benefit the area by following the principles of 'Renfrewshire's Places' Design Guidance;
- Development is supported by existing or planned infrastructure; •
- Buildings and structures are designed to support the enhancement and delivery of low carbon generating technology to reduce emissions; and
- The development does not have an adverse effect on the integrity of any sites protected as a Natura 2000 site. •

The Local Development Plan must be applied in its entirety. All development proposals must be assessed against the Spatial Strategy, Policies, the Proposals Maps, the Placemaking Plans and the New Development Supplementary Guidance, to ensure compliance with the overall Spatial Strategy for Renfrewshire.

Renfrewshire's Economic Investment Locations are identified and promoted for the development of Class 4 Business, Class 5 General Industry and Class 6 Storage and Distribution development as well as ancillary service provision, along with support for a wider range of employment generating uses.

All proposals for employment generating uses not listed in Use Classes 4, 5 & 6 require to demonstrate:

- the resultant economic impact of the proposed development including the number of additional employment opportunities to be created; and,
- that proposals would not have a significant detrimental impact on the role and function of the Economic Investment Location, the vitality and viability of Renfrewshire's Network of Centres, transport infrastructure and the built and/or natural • environment of the area.

Development proposals must demonstrate that development does not have an adverse effect on the integrity of any Natura 2000 sites.

The New Development Supplementary Guidance sets out the role and function of Renfrewshire's Economic Investment Locations.

City Deal investment aims to make a significant contribution to the Renfrewshire economy and sustainable and inclusive economic growth including: increased employment; the health of Renfrewshire's Centres; the delivery of new homes; the visitor economy; and, enhanced accessibility and connectivity across Renfrewshire.

In line with the Renfrewshire Local Development Plan Spatial Strategy the delivery of Renfrewshire's City Deal infrastructure projects as set out in Figure 4 (of the LDP) and associated development proposals across Renfrewshire will be supported to ensure the anticipated economic benefits are fully realised.

All development proposals associated with the delivery of City Deal investment will be considered in relation to the Renfrewshire Local Development Plan Spatial Strategy and require to be assessed against the relevant Local Development Plan policies and the New Development Supplementary Guidance. Development proposals must demonstrate that development does not have an adverse effect on the integrity of any Natura 2000 sites.

Transition Areas aim to support a mix of uses.

Development proposals or a change of use within Transition Areas require to be able to co-exist with existing uses, having no significant effect on the character and amenity of the surrounding area and demonstrate that it does not have an adverse effect on the integrity of any Natura 2000 sites. The New Development Supplementary Guidance lists the areas identified as being in transition and the acceptable uses within these sites.

Policy E4 – Tourism

Proposals for sustainable tourism development including new or expanded tourism-related facilities will be supported where it can be demonstrated that:

- The proposed development is capable of strengthening the appeal and attraction of Renfrewshire to a range of visitors;
- The scale of the proposal is proportionate, fits in well with the location and would be compatible with neighbouring land uses;
- The development will complement existing / proposed tourist facilities in that area;
- Additional visitors that may be attracted to the area can be accommodated by existing infrastructure or improvements to facilities; and,
- The development can demonstrate a site specific locational need.

| The deve   | lopment can demon  | strate a site specific  | c locational need.  |  |   |  |  |   |  |   |  |  |

#### POLICY E5 – Glasgow Airport

The Glasgow Airport Operational Land, as shown on the Proposals Maps, is a key location which will support economic growth and the requirements of the airport including sustainable transport and travel. Within the Glasgow Airport Operational Land there will be a presumption in favour of uses associated with the operational functions of the airport or, uses which are compatible and do not compromise the airport operation or functionality.

Development proposals in or around the airport should not have a significant adverse impact on the operation and/or infrastructure of the airport, the delivery of City Deal infrastructure investment, the environment and it must be demonstrated that it does not have an adverse effect on the integrity of any Natura 2000 sites.

#### Policy C1 – Renfrewshire's Network of Centres

Each of the centres in Renfrewshire form part of a diverse, interconnected network of places to live, shop, work, enjoy entertainment, leisure and cultural activities and gain access to sustainable transport and active travel connections. Development that will strengthen the network and enhance its centres, ensuring they are places which are vibrant, inclusive, accessible and complementary, as well as compatible with surrounding land uses will be welcomed.

All development proposals within the Network of Centres will be considered in line with the hierarchy and role and the function of centres as set out within the New Development Supplementary Guidance and the sequential approach set out in Scottish Planning Policy.

#### ιy

Proposals for new retail, leisure, visitor attractions and other major footfall generating developments appropriate to the network of centres should be located in accordance with the sequential approach set out in Scottish Planning Policy, subject to the availability of suitable opportunities.

Proposals out with the network of centres should:

- Provide clear justification as to why sites within the network of centres have been discounted, demonstrating a sequential approach has been undertaken to site selection;
- Demonstrate that the development will contribute to the area without significantly impacting on the vitality and viability, either individually or cumulatively, of the centres within the defined network; •
- Demonstrate that proposals are of an appropriate scale and do not significantly impact upon the function, character and amenity of the surrounding area; •
- Demonstrate that the development would tackle deficiencies in qualitative or quantitative terms that cannot be met in the network of centres; and, ٠
- Demonstrate that the proposal is accessible by a choice of sustainable transport modes. •

Good accessibility and connectivity to walking, cycling and public transport to support modal shift is a key consideration for investing in Renfrewshire.

All development proposals require to ensure appropriate provision and accessibility including the ability to connect to active travel, public transport networks, hubs and interchanges and for residential development to provide safe routes to school, setting out how this can be achieved. Development proposals which give priority to sustainable modes of travel and have no significant impact on the safe and efficient operation of the local or trunk road network will be supported.

Development proposals require to be designed to incorporate existing or future high speed digital network connections and other digital technologies.

**POLICY I3 – Flooding and Drainage** 

The delivery of the Clyde and Loch Lomond Flood Risk Management Plan, the Scotland and Clyde Area River Basin Management Plans and the Metropolitan Glasgow Strategic Drainage Plan will be supported in order to reduce flooding, flood risk and improve the condition of water bodies within Renfrewshire.

A precautionary approach will be adopted to the reduction of flood risk from all sources in line with the risk framework set out in Scottish Planning Policy. Avoidance is the first principle of Sustainable Flood risk Management. New development require to avoid areas susceptible to flooding and developers will be required to demonstrate promotion of sustainable flood risk management measures by implementing suitable drainage infrastructure. Development must not have an adverse impact on existing drainage infrastructure, increase the risk of flooding or result in the loss of land that has the potential to contribute to the management of flood risk through natural flood management, green infrastructure or as part of a flood management scheme.

Development which involves land raising will be considered in relation to the risk framework set out in Scottish Planning Policy with any loss of local flood storage capacity secured on a like for like basis. New development will integrate surface water management into the design of green infrastructure based on naturalised Sustainable Urban Drainage Systems (SUDS). Flooding and drainage measures require to have a positive effect on the water environment as well as the natural heritage interests of the site and land surrounding the site.

All development proposals require to be supported by an assessment of flood risk and drainage when deemed necessary by the Planning Authority.

#### Renewable and Low Carbon Energy Developments

Development proposals which deliver increased energy efficiency and the recovery of energy that would otherwise be lost will be supported. Renewable and low carbon energy developments, including the delivery of heat networks, will be considered in the relation to the scale of the contribution towards renewable energy generation targets and will be supported in principle where they are appropriate in terms of the location, siting and design having regard to any individual or cumulative significant effects on:

- Local environment, landscape character, built, natural or cultural heritage and water environment; •
- Amenity of existing or allocated uses; •
- Visual amenity, air quality, noise, glare and shadow flicker;
- Outdoor sport and recreation interest; •
- Transport infrastructure, including road traffic and the safety of local and trunk roads and the railway network; and, ٠
- The safe and efficient use of the Glasgow Airport, flight activity, navigation, flight paths and Ministry of Defence surveillance system. ٠

Figure 10 identifies areas across Renfrewshire with potential for heat networks based on existing energy demand and proximity of existing energy resources.

All Major Development planning applications will require to consider the feasibility of meeting the development's heat demand through a district heating network or other low-carbon alternatives. New development located next to significant heat sources will be designed so that it can connect to an existing heat network or a wider planned network at a future date. Any land required to deliver the heat network will be protected and incorporated into the design and layout of the proposed development. Where a heat network is not viable, the use of micro-generation and other heat recovery technologies will be encouraged.

#### POLICY 15 – Waste Management

Existing waste management infrastructure and facilities will be safeguarded where they support the delivery of the Zero Waste Plan and follow the waste hierarchy. Incompatible uses in the vicinity of current sites will be resisted.

Development proposals for waste management infrastructure and facilities on new or existing sites will require to demonstrate how it conforms to, meets and delivers the objectives of the Zero Waste Plan. Development proposals will be supported where:

- The site has a good level of accessibility and the development does not have an adverse impact on the existing road network;
- The transportation of waste is kept to a minimum; •
- It is able to co-exist with surrounding existing and allocated land use; •
- The benefits of the proposal are demonstrated, taking into account the environmental, social and economic effects;
- It is located on or adjacent to land previously licensed for waste management processes without impact upon amenity or the operation of other uses or on land designated for Renfrewshire's Economic Investment Locations, subject to site specific considerations;
- The potential for the integration of waste and energy innovations is fully explored where it is demonstrated to be viable; ٠
- It protects the built heritage and natural environment and demonstrates that it does not have an adverse effect on the integrity of any Natura 2000 sites; and
- Restoration and after-use proposals which are compatible with adjacent land uses and the local environment are set out prior to development. •

| All new developments must include and demonstrate suitable and well-designed provision for waste storage, recycling and collection. |  |

**POLICY P1 – Renfrewshire's Places** 

Within uncoloured areas on the proposals maps there will be a general presumption in favour of a continuance of the built form. New development proposals within these areas should make a positive contribution to the Place and be compatible and complementary to existing uses as set out by the New Development Supplementary Guidance and Renfrewshire's Places Design Guidance.

POLICY P2 – Housing Land Supply

A 5-year supply of effective housing land will require to be maintained at all times which provides a range and choice of sites and supports the delivery of sustainable mixed communities throughout Renfrewshire. The housing sites listed in Appendix 1 will be reviewed annually through the Renfrewshire Housing Land Audit and are identified as housing sites to meet Renfrewshire's Housing Supply Targets.

Should the Council identify a shortfall in the 5-year supply of effective housing land during the plan period, planning applications for new housing developments will be considered in relation to the criteria in Policy 8 of Clydeplan (2017), the framework set out in Appendix 1 and the New Development Supplementary Guidance.

Development proposals that provide a mix of housing types and tenures to meet current and future housing needs and support sustainable mixed communities will be supported.

Residential proposals will require to demonstrate how they meet local housing need and demand providing a mix of housing on all residential sites. A mix of housing to meet specific housing needs requires to be considered, including housing for older people and less able residents, along with the delivery of starter homes and smaller units.

Affordable housing requirements will require to be addressed in all residential developments where 50 or more dwellings are proposed providing up to 25% of the total site capacity in line with the New Development Supplementary Guidance. The appropriate housing mix for the locality and viability of the development will be key considerations in the delivery of new affordable housing.

Affordable housing provision can be across a range of tenures, including social housing for rent, mid-market rented accommodation, shared ownership housing, shared equity housing, housing sold at a discount (including plots for self-build), and low-cost housing without subsidy.

#### POLICY P4 – Sites for Gypsies, Travellers and Travelling Showpeople

Proposals for small privately-owned sites to accommodate Gypsies/Travellers and Travelling Show People, whether transit or permanent, will be supported where it can be demonstrated that:

- there is an identified locational need;
- the site can provide users with an acceptable level of residential amenity;
- access, parking, servicing and other on-site requirements (water supply, drainage/flood risk, electricity and waste collection) can be satisfactorily met;
- there will be no significant detrimental impact on the amenity of the surrounding area;
- the site is accessible to public transport, local schools and other local services and facilities; and,
- the site will complement and be compatible with the character and appearance of the surrounding area.

POLICY P5 – Green Network/Blue Network

Development which protects, maintains or enhances the quality and connectivity of green/blue networks as an integral functioning part of the place, including core paths, rights of access, open space and the water environment will generally be supported. Development proposals should contribute to and enhance the wider integrated green/blue network where there are opportunities for activity and access to open space as well as increasing accessibility to active travel routes in and around communities and places.

Areas of open space, recreation provision and amenity space, as shown on the Local Development Plan Proposals Maps, will be protected from development. Any development proposals which would result in the loss of an area of open space not identified on the Proposals Maps will be assessed in relation to criteria set out in the New Development Supplementary Guidance.

New development must link to or incorporate accessible multifunctional open space, recreational facilities and amenity space of a quality and quantity, in the right location, to meet the needs arising from the development. Open space should be designed to meet the recreational needs of people of different ages and physical abilities contributing to health and wellbeing across Renfrewshire.

### **POLICY ENV 1 – Green Belt**

The green belt in Renfrewshire maintains the identity of settlements, protecting and enhancing the landscape setting of an area and protecting and promoting access opportunities to open space.

Development within the green belt will only be considered acceptable where it can be demonstrated that it is compatible with the provisions of the New Development Supplementary Guidance. Support will be given to developments that are able to demonstrate diversification within green belt and rural areas which promote new employment, tourism opportunities and / or community benefits.

### OLICY EINV Z – Natural heritage

Development proposals will consider the potential impacts on natural heritage. Development proposals should protect and restore degraded habitats, enhance and promote access to Renfrewshire's natural environment and minimise any adverse impacts on habitats, species, network connectivity or landscape character. Developments must not have an adverse effect on the integrity of sites protected for their natural conservation interest or the wider biodiversity and geo-diversity of the area.

All proposals will be assessed in terms of the mitigation hierarchy of Avoid/Reduce/Compensate, the cumulative impact of development based on the precautionary principle and should protect, and where possible enhance:

- Natura 2000 and Ramsar Sites;
- Protected Species;
- SSSI's;
- Wild land; •
- LNRs, SINCs and wildlife corridors;
- Biodiversity;
- Landscape character and setting; •
- Clyde Muirshiel Regional Park; •
- Trees Ancient and semi- natural woodland in line with the Scottish Government's Control of Woodland Removal Policy and Clydeplan's Forestry and Woodland Strategy, significant trees including those covered by Tree Preservation Orders, • hedgerows and trees within Conservation Areas

Developments and changes of use affecting those outlined above will be assessed against criteria set out in the New Development Supplementary Guidance.

Renfrewshire's built and cultural heritage which includes listed buildings, conservation areas, scheduled monuments, sites of known archaeological interest, unscheduled archaeological sites and the inventory of gardens and designed landscapes will be safeguarded, conserved and enhanced, where appropriate.

Development proposals, including enabling development, within or in the vicinity of built and cultural heritage assets will be required to demonstrate that there is no negative impact to their site or setting and is in accordance with the provisions set out in the New Development Supplementary Guidance.

There will be support for the retention and sympathetic restoration, appropriate maintenance and sensitive management of listed buildings to enable them to remain in active use.

The layout, design, materials, scale, siting and use of any development which will affect a listed building, or its setting should be sensitive to the buildings character, local landscape character, appearance and setting.

POLICY ENV4 – The Water Environment

In line with the Clyde and Loch Lomond Flood Risk Management Plan and the Scotland and Clyde Area River Basin Management Plans, there will be support for proposals which encourage protection of the existing water environment, improvements to the control and management of water and the enhancement of biodiversity, flora and fauna surrounding blue corridors.

The Blue Network identified on Figure 14 will be protected and where necessary enhanced in order to facilitate improvements to the quality of water bodies and the water environment. The inclusion of green infrastructure which promotes the integration of blue and green networks in and around developments will be encouraged to ensure that the water environment is central to the fabric of places, contributes to sustainable flood management and does not have an adverse effect on the integrity of any Natura 2000 sites.

### POLICY ENV5 – Air Quality

Development proposals individually or cumulatively should not have a significant adverse effect on air quality particularly within or adjacent to Renfrewshire's Air Quality Management Areas as shown on the Proposals Maps.

Where required, planning applications should be accompanied by an air quality assessment which demonstrates the likely impact on air quality and how such impacts will be mitigated, including measures that support active travel and public transport as an alternative to private vehicular traffic.

### POLICY ENV6 – Natural Resources (Minerals and Soil)

### Minerals

Development proposals require to demonstrate that they will not result in the sterilisation or degradation of mineral deposits that have or can be shown to have potential of being extracted economically.

Proposals for the winning and working of minerals will be permitted, where appropriate, when related to existing workings or in exceptional cases, where resources of a particular type or quality are unavailable from a suitable alternative source. Proposals will also be considered in relation to other relevant Development Plan Policies.

Development proposals in some parts of Renfrewshire may be at risk from unstable ground which is a legacy of previous mine workings. The Coal Authority publishes maps of such areas and development proposals in these locations will require to be accompanied by a Coal Report to help determine options for the future development of the site.

### Soils

New development should avoid the unnecessary disturbance of areas of peatland or carbon-rich soils with a presumption against development which would involve significant draining or disturbance of peatland or carbon-rich soils. There will be support for peatland restoration, including rewetting where appropriate.

Where peat and other carbon rich soils may be affected by development, a survey and management plan will be required which identifies:

- means of minimising impact on carbon rich soils ensuring that the areas of deepest peat have been avoided and unnecessary disturbance, degradation or erosion of peat has been avoided;
- management measures relative to the carbon rich soil; and, ٠
- suitable mitigation measures to minimise the potential effects on CO2 emissions.

### Summary of Assessment of Policies and Spatial Strategy

- 2.1 Through the Strategic Environmental Assessment of the policies and Spatial Strategy contained within the Renfrewshire Local Development Plan Proposed Plan, it was determined that there are no significant additional environmental impacts identified through implementing the Renfrewshire Local Development Plan Proposed Plan.
- 2.2 Any potential negative impacts identified through the Strategic Environmental Assessment will be, where required, appropriately mitigated in consultation with Key Agencies during planning application stage.
